## About Me

Hello, my name is Erick and I love creating digital products. My interest in programming grew out of curiosity. Growing up, I was always fascinated by the world of technology and the endless possibilities it offered.

My late father was a software engineer. He instilled in me a love for problem solving and creativity. Although he is no longer with us, his influence and guidance continue to inspire me everyday as I pursue my passion for programming.

## Experience

### Gallaf Freelance Marketplace

[gallaf.vercel.app](https://gallaf.vercel.app)

A web-based marketplace that connects buyers and sellers of freelance accounts. This platform provides a safe and secure way for users to buy and sell these accounts, allowing them to easily expand their business or find the right account for their needs.

Implemented server-side rendering, authentication, and real-time database features with Next.js and Firebase. Created a responsive and user-friendly interface using Tailwind CSS. The project helped me solidify my understanding of server-side rendering using Next.js, authentication using google one tap sign-up.

### Cullen Networks

[cullen.networks](https://cullen.networks)

Cullen Networks is a platform that provides an easy way for farmers and food providers to find and access the cold storage they need to preserve their crops and products, ensuring that they stay fresh and high-quality.

The application leveraged the power of Next.js, Firebase, and Tailwind CSS. I used Next.js to implement server-side rendering, Firebase for authentication, and real-time database features, and Tailwind CSS to create a responsive and user-friendly interface. The application is part of a project I'm working on currently that will include three different applications for different customer segments.

## Programming Languages

JavaScript (ES6), TypeScript, HTML, CSS/Sass, MQL5, Python, R

## Libraries & Frameworks

React, Next.js, Node.js, Express,

## Tools & Platforms

Git, GitHub, Vercel, Webpack, WordPress, Docker, Firebase, Visual Studio Code

## Design

Figma, Canva
